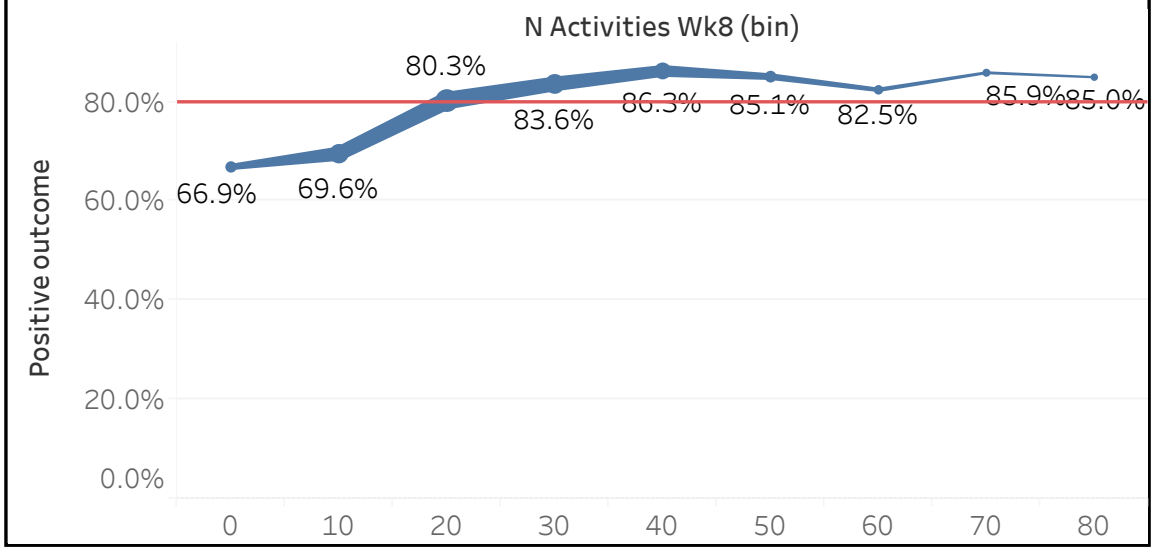
Week-8 intervention simulation



Methodology:

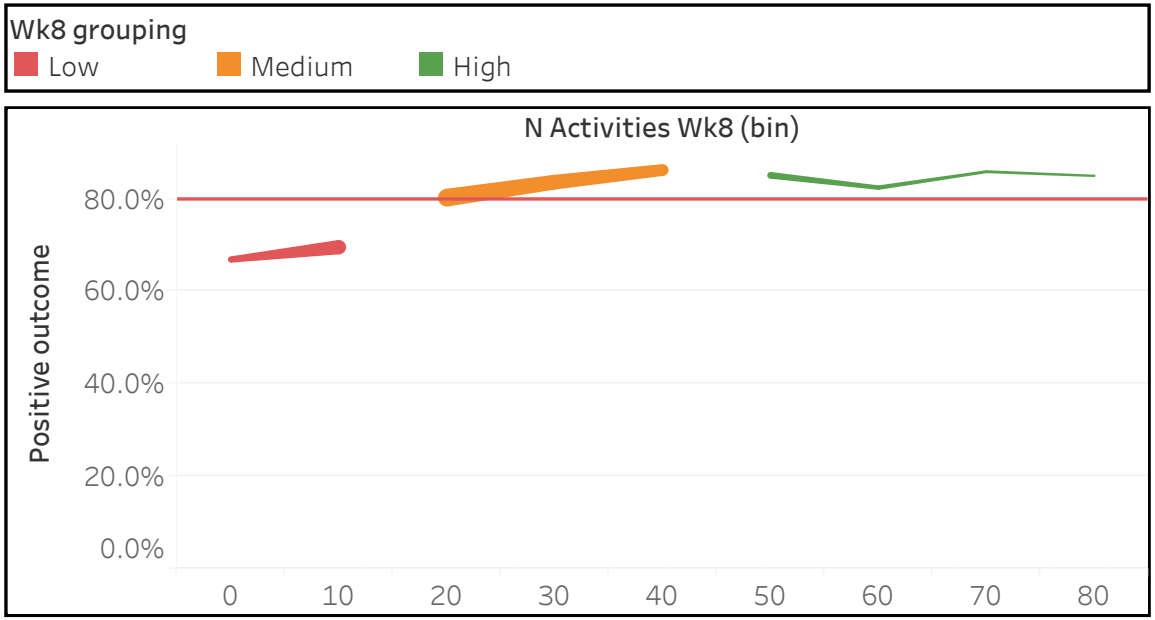
Group the number of activities into low/medium/high (chart on bottom left).

Then look at the median RTW days for each group (table below).

If an intervention resulted in all the Lows turning to Mediums, then 807 claims would close 41 days sooner (RTW 174 vs 133).

Saving a total of 33,087 days.

Further, can we reduce any ”wastge” in the High group, impacting 451 claims?



Wk8 grouping	Number of claims	Positive outcome	Median RTW days	RTW weeks
Low	1,089	68.9%	210	30.0
Medium	2,471	83.0%	157	22.4
High	655	83.7%	152	21.7
